

## ABSTRACT

A method and system are provided for organizing and assembling information and resources for display as part of an electronic space supported on a network. The electronic space preferably resembles a room. The room is decorated with selected images that may be iconic representations that activate links to specific resources such as databases, technical information, word processing applications, etc., that are user selected to support idea conception and evaluation to promote creativity, innovation and improved problem solving. The electronic space enables a user to customize an on-line workplace with decorations as well as active links to selected resources which may include human resources such as colleagues, co-workers or experts.
